

**BS & BSE Series**

Features	Benefits
<b>Designed to fit Skid Steer Loader hitches or Euro style hitches</b>	The BS Series can be attached to machines fitted with a Skid Steer adapter mounting plate and the BSE Series can be attached to machines fitted with a Euro style adapter mounting plate.
<b>Bales can be pushed with single and double spear units</b>	Good for pushing bales onto side dump trailers.
<b>Spear units punch holes in end of bale not in the circumference</b>	Very little moisture can enter the bale where spears punch. Grappling type bale lifts punch holes in the circumference allowing moisture to penetrate the bale and accelerates bale deterioration.
<b>Single spear units also include two short bale spikes</b>	Bale spikes keep bale from rotating on the single spear.
<b>Single spear units takes less force to push the spear into the bale</b>	Bales of all sizes won't shift positions as easily while pushing the spear into the bale. Single spears are ideal for lifting smaller lighter bales.
<b>Double spear units can lift heavier bales</b>	Two spears spaced apart miss the soft inner core of a bale and probe the harder outer area allowing the spears to lift a heavier bale. Also, two spears do a better job of stabilizing the load.
<b>Double spear units probe lower on the bale</b>	They can lift the bale higher.
