

BS & BSE Series

Features	Benefits
Designed to fit tractor/skid steer loader hitch or Euro hitch.	The BS Series can be attached to machines fitted with a tractor/skid steer mounting plate and the BSE Series can be attached to machines fitted with a Euro style mounting plate.
Bales can be pushed with spears.	Good for pushing bales onto side dump trailers.
Spear units punch holes in end of round bales not in the circumference.	Very little moisture can enter the bale where spears penetrate. Grappling type bale lifts perforate the circumference allowing moisture to penetrate the bale and accelerate bale deterioration.
BS30, BSE30, BS40 & BSE40 Options	
Three lower spears available in 32", 39", or 49" lengths.	Good for lifting medium weight square bales. Optional lengths allows customer to choose which length best fits their application.
BS40 & BSE40 Options	
One 49" spear with two 19" spikes	Good for lifting one medium weight round bale. Bale spikes keep bale from rotating a single spear. Single spear takes less force to penetrate the round bale. Bales of all sizes won't shift positions as easily while pushing spear into the bale.
Three lower spears available in 32", 39", or 49" lengths	Good for lifting medium weight square bales. Optional lengths allow customer to choose which length best fits their application.
Extensions with 19" spikes.	Good for lifting two medium weight square bales with one stacked above the other.
BS50 & BSE50 Options & Accessory	
Three lower spears available in 32", 39", or 49" optional lengths.	Good for lifting medium weight square bales. Optional lengths allow customer to choose which length best fits their application.
Four lower spears available in 32", 39", or 49" lengths.	Good for lifting medium to heavy square bales. Optional lengths allow customer to choose which length best fits their application.
Two 19" spikes. (Accessory)	Good for lifting two medium to heavy round bales side by side when used in conjunction with four lower spear option.
Extensions with 19" spikes. (Optional)	Good for lifting two medium to heavy square bales with one stacked above the other.
